

Tip Top Idea for creating a password

- Write several words and numbers on little pieces of paper.
- Fold them up and put them in a bowl.
- Pick out 4 pieces.
- Voila! There is your secure password!

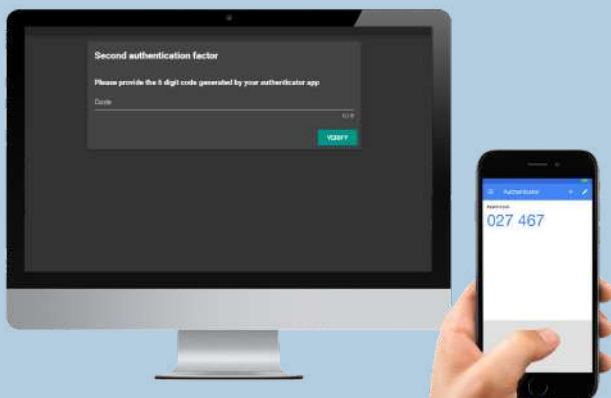

OR....

2-FACTOR AUTHENTICATION

- Also referred to as a 'two-step verification' or 'dual factor authentication'.
- It is basically an additional layer of security that protects your sensitive data and makes it harder for hackers to gain access to your device or online account
- The single-factor authentication only requires a password/pass-code.
- The second factor is usually an application on your phone.
- An advantage is that it is Cyber Essentials compliant, strengthening your organisation's resilience and defence against cyber-attacks.

Did you know..

- 90% of passwords can be cracked in less than six hours.
- Two-thirds of people use the same password everywhere.
- Sophisticated cyber attackers have the power to test billions of passwords every second.

Keyfort IT Engineering Service Portal uses 2-factor authentication to protect your sensitive data.
