

Stay connected with VoIP

As businesses and technology evolve and grow, communicating with one another is very important. Which is why more and more organisations around the world are starting to use VoIP Telephone systems to stay connected.

VoIP stands for Voice over Internet Protocol, and it is a way to reduce telephone costs and improve call management. VoIP call management allows calls to be routed quickly and efficiently to the right person or groups of people. Calls can be received and made from desk phones, PCs and mobiles using the same number, thus facilitating work away from the office without impacting the calls on colleagues.

How can Keyfort help you?

Keyfort provides world class hosted or site VoIP service. Keyfort's staff are trained to give you the best advice, so if you are not sure whether to upgrade to a hosted or a site VoIP system, the team will ensure your needs are met.

Keyfort's VoIP systems include comprehensive VoIP features which are tailored in accordance with requirements.

Keyfort provides comprehensive installation of the VoIP telephone system, complete with training so that you can maximise the benefits of the VoIP features.

*How did the telephone propose
to his boyfriend?
He gave him a ring!*

The Benefits are:

- **Lower Costs:** Using the internet instead of telephone line rentals.
- **Efficient Call Management:** Useful free features including conferencing, call waiting, call ID, call forwarding and call recording.
- **Reliable:** Adopted by many organisations around the world.
- **Flexibility:** Adding more phones is very easy.
- **Portability:** Stay connected with mobile and desk-based phone, allowing you to stay connected even at home or moving around anywhere in the country.
- **Comprehensive reporting of calls and response times.**
