

2ND SEPTEMBER 2020

How to Stay Connected

Businesses with faster connection have improved productivity, boosted employee satisfaction and effective remote working. There are different beneficial services available for your organisation to provide you with secure connection, such as ADSL (Asymmetric Digital Subscriber Line), Fibre, Leased Line, 4G and Wi-Fi solutions.

The Fibre Optic Solutions

Fibre to the Premises (FTTP)

FTTP is pure fibre optic which allows for faster and more reliable connection. Keyfort is a Virgin Media Business partner therefore, we can supply Virgin Media Business connections to customers (subject to location). We can also customise a service package to meet your organisations needs.

Fibre to the Cabinet (FTTC)

Fibre is run from the green boxes you see on every road, and the remaining cable which is copper is connected to your home or premises. The purpose of FTTC is to provide super-fast broadband connection, this includes a downstream of 80 Mbps and an upstream speed of 19 Mbps. This is faster than ADSL broadband.

4G Solutions

Mobile broadband and signal coverage now covers the majority of the UK. 4G can be a both cheap and flexible solution which can keep even the most remote locations connected to the business world. Keyfort's 4G solutions paired with our business security appliances can make sure your coverage is flexible and your data is secure.

WiFi

Many organisations have implemented wireless networks. However, they aren't utilising them to their full potential. Keyfort's Wi-Fi solutions include:

- Multiple Building Coverage
- User Classes
- Business Class Hardware
- Security and Management
- Power over Ethernet (PoE)

I turn once, what is out will not get in. I turn again, what is in will not get out. What am I?
I'm a key
