

Out with the Old PSTN Phone Lines

Bulletin 1

In with the new internet based phones VoIP. As of 2025 BT (Open Reach) is transitioning from the old PSTN telephone lines to broadband internet and will no longer sell new PSTNs. Keyfort can help your organisation transition from old PSTN telephone lines to broadband internet today!

This will not just impact phone lines but also legacy systems such as lifts, CCTV, security cameras and traffic lights.

So now is a good time to work with Keyfort to audit your PSTNs with a view to transitioning these services to modern internet alternatives. Such as VoIP telephony where calls are routed over the internet and would allow your organisation to make free or very low cost calls.

Keyfort is keen to work with you and discuss the best options for your organisation!

Keyfort have been providing IT services for the NfP, SME (Education) and waste management sector for over 20 years. For more information visit:
