

# Time to Move to VoIP

As of 2025 or before subject to local telephone exchange, BT (Open Reach) is transitioning from the old ISDN/PSTN telephone lines to internet/VoIP and will no longer sell new ISDN/PSTNs. Therefore, now is the perfect time to move to VoIP (Voice over Internet Protocol). VoIP facilitates better call management and cost savings compared to the old PSTN/ISDN lines.

## How VoIP Will Benefit Your Organisation:

- **Keep Existing Number** - You can keep your existing telephone numbers.
- **Efficient Call Management** - With, hunt groups (facilitates phoning a group/department of phone lines), follow me round to receive office calls on your mobile, conferencing, video conferencing, call waiting, caller ID, call recording and call forwarding.
- **Reliable** - VoIP has been developed over many years and is constantly advancing.
- **Resilient Connectivity** - Multiple offices/buildings can receive, transfer and make calls as if they were one office.
- **Flexibility** - Adding more phones is easy, just plug another handset.
- **Reduces Telephone Costs** - VoIP is a modern, flexible, and efficient phone system where calls are routed over the internet, reducing your telephone bills.

**Keyfort has helped many organisations move to VoIP, so now is the perfect time for your organisation to call to discuss the available options.**
